

Reduce no-shows. Recover lost appointments.

Renvoo helps dental clinics reduce no-shows, handle late cancellations earlier, and recover lost appointment capacity without adding front-desk work.

Why the problem matters

Dental clinics lose money when booked chair time goes unused, and staff absorb the uncertainty through manual confirmations, rescheduling, and short-notice recovery work.

No-shows turn booked time into lost revenue

Booked chair time only creates value if the patient actually attends the appointment.

Late cancellations still leave chair time empty

Late notice can still leave too little time to recover the slot.

Reminders exist. Prevention does not.

Standard reminders still leave clinics reacting too late around risk.

Illustrative clinic scenario

2 missed appointments/day can translate into roughly EUR 8k/month in lost revenue if the slots are not recovered.

What Renvoo changes operationally

1 Identify higher-risk appointments

2 Trigger stronger confirmation or rescheduling earlier

3 Track patient response centrally

4 Recover otherwise lost capacity when possible

Low-friction for clinics by design

Administrative data only

No diagnoses or clinical notes.

Lightweight onboarding

CSV-first and read-only paths first.

Clinic control

Operational visibility without heavy disruption.

Preliminary pilot pricing

Preliminary pilot pricing starts at EUR 2.49 per appointment, plus a fixed fee depending on the clinic. Final pricing is still being shaped with pilot partners.

Renvoo is being built by Mohamed Ibrahim, former Electrical Subteam Lead for Team Polar at TU/e and part of the NVIDIA 6G Developer Program. We are looking for a short validation meeting with a dental clinic owner or practice manager to review your current no-show and rescheduling workflow.
